QuickPeek: Keyboard-Based Deleted File Preview System

1 Field of Inventions

This invention generally relates to the field of computer operating systems and user interface utilities.

2 Background of Invention

In modern operating systems, when users delete files, they are typically moved to a temporary storage location such as the Recycle Bin (Windows), Trash (macOS), or similar systems in other environments. This mechanism serves as a safeguard, allowing users to recover mistakenly deleted files.

However, current systems do not provide a native, integrated preview mechanism for deleted files directly within the Recycle Bin. So, the users are left only with two options one, to restore the file and the second is to rely on file names and metadata to determine a file's contents. Among these two options both proves inefficient because, we may be able to remember the file name which was deleted one or two days ago but not which we deleted a week ago or more.

Furthermore, no widely adopted system offers a keyboard-driven shortcut to show the real-time preview of file from Recycle Bin without the need to restoration.

There are some third-party tools exist for file recovery or file management, but they often lack the support for visual preview of the file. Thus, this invention addresses this need.

3 Summary of Invention

This invention introduced a utility tool that allows users to preview files directly from the Recycle Bin using a custom keyboard shortcut. It provides real-time visual previews of deleted content, such as images and PDF's, without requiring restoration.

4 Object of Invention

The primary objective is to develop a system level utility that enables the users to preview deleted files from the Recycle Bin without restoring them. It aims to offer quick, keyboard-triggered access to file preview.

Abstract

This invention discloses a system-level utility tool designed to provide real-time previews of files stored in the Recycle Bin without requiring restoration. The tool operates by deducing when a user selects a file within the Recycle Bin and subsequently presses a designated keyboard shortcut.

We Claim

- 1 QuickPeek: Keyboard Based Deleted File Preview System is a utility tool configured to operate within a desktop operating system, the tool comprising: a selection detection module for identifying files selected by a user within the Recycle Bin; a keyboard listener module for detecting a specific key combination input; a file identification unit for determining the selected file's type; and a preview generation module for rendering the selected file in a non-intrusive overlay without restoring the file;
- 2 The System Architecture Claim 1, wherein the preview is activated only when a file is selected via a single mouse click inside the Recycle Bin;
- 3 The System Architecture Claim 1, wherein the keyboard listener detects a custom shortcut input defined by the user;
- 4 The tool of Claim 1, wherein the preview generation module loads image files as thumbnails using a graphics processing library and the preview generation module renders the first page of PDF files using a document rendering engine;
- 5 The System Architecture Claim 1, configured to be initiated manually by the user or automatically at system startup.
- 6 The System Architecture Claim 1, wherein the system runs in the background and consumes minimal system resources;
